

As part of our commitment to the health and wellbeing of our Team, Customers and the larger community, we are carefully monitoring the situation and are looking to health agencies for information and guidance.

Our standard cGMP policies and procedures are in place as routine preventative measures to ensure that our production environments, equipment and tools are cleaned and sanitized, our team is in good health, we provide information about good hygiene practices and illness prevention, and our facility is monitored for environmental quality, as well as frequently cleaned and disinfected.

Pharmco Laboratories, Inc. has high standards of cleaning and sanitation and has health and safety protocols in place, such as:

- Training for Team Members, with ongoing reinforcement on a regular basis
- Defined cycles for frequent cleaning and disinfection of targeted areas
- Easy access to hand washing facilities and hand sanitizers
- Quick response to spills, trash and other situations
- End-of-day sanitation procedures for restroom, kitchen and other facilities
- Frequent cleaning and “wash down” of common locations, including walkways

The CDC recommends everyday preventive actions to help prevent the spread of respiratory illnesses like coronavirus/COVID-19, such as:

- Staying home when sick
- Washing hands often with soap and water for at least 20 seconds
- Following proper respiratory cough etiquette
- Avoiding close contact with people who are sick
- Avoiding touching eyes, nose and mouth with unwashed hands
- We continue to communicate about these recommendations, as well as other important health information, to our Team Members.

While we do not anticipate any impact to our production schedule and we are closely monitoring the situation. We will notify you if there are any changes that will impact your timelines.
